

MOTHS AT LANDGUARD POINT SUFFOLK 2001

In 1991 and 1992 a small battery operated Heath Trap was run. From 1993 to 2001 as a result of on site electricity, a Robinson Trap was operated. This trap was kindly supplied by the Suffolk Naturalists Society. A second Robinson trap was also operated from 1996 to 2001.

During 2001 traps were run from 9th March to 29th November. Dates referred to are for the mornings on which the trap was emptied. Identification was carried out by myself and Mike Marsh with assistance for macro's from Mike Hall and Gerry Haggett for a couple of specimens in order to confirm identification. Assistance in identifying some micro's was received from Tony Davies and John Langmaid. Tony Pritchard provided two larval records.

The classified list is intended to give some idea of flight times and includes some records found by cold searching. Up to 1996 many species were counted, unfortunately this is no longer possible in due to constraints on our available time and the pressure of running two traps nightly. Most migrant and species rarely recorded at Landguard are still counted. Some species of micro's are remaining unidentified due to lack of available expertise, however the acquisition of additional literature each year is allowing more species to be recognised. Species added to the ever growing Landguard list in 2001 can be determined by reference to the list of Lepidoptera 1991 - 2001. Anyone reading this report who can help in the identification of difficult species is asked to get in touch. Also anyone out there who would like to help empty traps is more than welcome to become involved.
