

MOTHS AT LANDGUARD POINT SUFFOLK 2018

In 2018 two Robinson traps plus a twin 30 watt actinic were run nightly 8th March to 13th May with the 30 watt actinic then replaced by a 20 watt Skinner and all three run to 11th December. Dates referred to are for the mornings traps were emptied or for day time records the day they were seen. Traps were emptied & identification carried out by Nigel Odin & Eric Patrick with help from Jeff Higgott & Mike Marsh. Some micro's are not identified due to a lack of time required for determination. A few specimens for 2018 & from some previous years are still to be determined, these records will be included in future reports if thought to be relevant. All records below are for 2018 unless otherwise stated.
