

MOTHS AT LANDGUARD POINT SUFFOLK 2019

In 2019 two Robinson traps plus a 20 watt Skinner were run nightly 19th February to 8th December. Dates referred to are for the mornings traps were emptied or for day time records the day they were seen. Traps were emptied & identification carried out by Nigel Odin & Eric Patrick with help from Jeff Higgott & Mike Marsh. Some micro's are not identified due to a lack of time required for determination. A few specimens for 2019 & from some previous years are still to be determined, these records will be included in future reports if thought to be relevant.

All records below are for 2019 unless otherwise stated.
