

MOTHS AT LANDGUARD POINT SUFFOLK 2020

In 2020 two Robinson traps plus a 20 watt Skinner were run nightly 3rd March to 3rd December. Dates referred to are for the mornings traps were emptied or for day time records the day they were seen. Traps were emptied & identification carried out by Nigel Odin with help from Jeff Higgott, Mike Marsh & Eric Patrick. Some micro's are not identified due to a lack of time required for determination. A few specimens for 2020 and from some previous years are still to be determined, these records will be included in future reports if thought to be relevant. All records below are for 2020 unless otherwise stated.
