

MOTHS AT LANDGUARD POINT SUFFOLK 2022

In 2022 two Robinson traps plus a 20 watt Skinner were run nightly 1st March to 3rd December. Dates referred to are for the mornings traps were emptied or for day time records the day they were seen. Traps were emptied & identification carried out by Nigel Odin with help from Will Brame, Jeff Higgott, Mike Marsh & Eric Patrick with Neil Sherman adding several leaf mines. Some micro's are not identified due to a lack of time required for determination. A few specimens for 2022 and from some previous years are still to be determined, these records will be included in future reports if thought to be relevant. All records below are for 2022 unless otherwise stated.
