

MOTHS AT LANDGUARD POINT SUFFOLK 2023

In 2023 two Robinson traps plus a 20 watt Skinner were run nightly 1st March to 30th November. Dates referred to are for the mornings traps were emptied or for day time records the day they were seen. Traps were emptied & identification carried out by Nigel Odin with help from Will Brame, Jeff Higgott, Mike Marsh & Eric Patrick with Neil Sherman providing extra records. Some micro's are not identified due to a lack of time required for determination. A few specimens from previous years are still to be determined, these records will be included in future reports if thought to be relevant. All records below are for 2023 unless otherwise stated.
