

MOTHS AT LANDGUARD POINT SUFFOLK 2024

In 2024 two Robinson traps plus a 20 watt Skinner were run nightly 15th February to 6th December. Dates referred to are for the mornings traps were emptied or for day time records the day they were seen. Traps were emptied & identification carried out by Nigel Odin with help from Will Brame, Mike Marsh & Eric Patrick. Some micro's are not identified due to a lack of time required for determination. A few specimens from previous years are still to be determined, these records will be included in future reports if thought to be relevant. All records below are for 2024 unless otherwise stated.
